

Write a java program which will take array elements as user inputs and print out the values of the array

Write a Java program which will add all the even elements and multiply all the odd elements from an array. Array elements will be given by the user.

Write a java program which will use bubble sort to sort out the elements from the following array

a={12,45,14,16,87,28,2,1,3,20,10,100,40,45,60}

Write a java program which will copy all the elements from the array b={42,32,12,10,23,42,5} to another array a.

Example of a matrix/multidimensional array

Write a java program which will print out the following matrix

0 1 2 3

4 5 6 7

8 9 10 11

int twod[][]= new int [4][5]

column number

row number

here two is a two dimensional array which has total 4 rows and 5 columns
